

# ICT Applications in Library Services

## Unit 4

### Smart Card–Types based on the configuration and functionalities

Presented By  
Rashmi H.

Guest faculty,  
Deptt. Of Library and Information Science,  
MLSU, Udaipur

- ▶ *Types of Smart Cards based on their functionalities and configuration*

- ▶ *Memory Card–*

- ▶ *These are cards which only consists of memory circuits. It can only store, read and write data to a particular location.*

- ▶ The data cannot be processed or manipulated.
- ▶ It can be a straight memory card which is only used to store data or a protected memory card with a restricted access to the memory and which can be used to write data.
- ▶ It can also be a rechargeable or a disposable and which contains memory units which can be used only once.

- ▶ Microprocessor Based Cards–
- ▶ These card consists of microprocessor embedded onto the chip in addition to the memory blocks.
- ▶ It also consists of specific sections of files with each file associated with a particular function.

- ▶ The data in files and the memory allocation is managed via an operating system which can be a fixed operating system or dynamic operating system.
- ▶ It allows for data processing and manipulations and can be used for multifunctioning.

*THANKS*
