

# Knowledge Organization

## Unit –1 Knowledge Meaning and Definition

Presented By  
Rashmi H.  
Guest faculty,  
Deptt. Of Library and Information Science,  
MLSU, Udaipur

- ▶ Knowledge is the totality of the ideas– the whole body of truth, fact, information, principles or other objects of cognition, conserved by human civilization.
- ▶ In the process of knowing there are 2 parties–one knower and the other the knowee.
- ▶ Knower  
i.e. man
- ▶ Knowee  
i.e. things or concepts

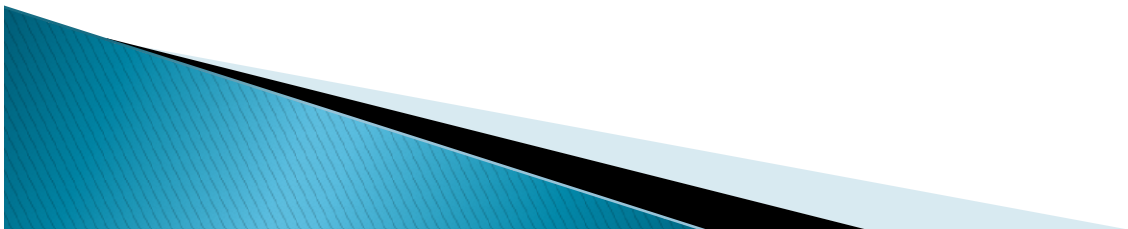

- ▶ Definition

- ▶ Russel–

- ▶ “Minds do not create truth or falsehood. They create beliefs. Beliefs do not depend on minds for their truth but they depend on minds for their existence. Thus, when there is no corresponding fact, the belief is false and when there is a corresponding fact, the belief is true and true belief is a fact.”

- ▶ **Rhyle** – “By our knowledge we may also refer to our capabilities”.
- ▶ **Shefali Gupta**– “Knowledge is something more than a belief or opinion. Knowledge has got an observational foundation. The observation is natural of interpretation.”

THANK YOU
